Continuation of Substance of Interview including description of the general nature of what was discussed: The newly amended claim 105 was no longer anticipated or suggested by prior art, but the limitation of reducing the production of analyte amplicon in the presence of a pseudo target by 44% relative to the reaction in which there was no pseudo target constituted a new matter. Mr. Gilly was contacted with a suggestion that incorporating a limitation of reduction of the coefficient of variability of the analyte amplicon in the presence of a pseudo target would make the claims allowable without introduction of a new matter. A proposed change in claim language was discussed, to be presented to Examiner Fredman for approval..
